

Acadia National Park Vegetation Map Class for Conifer Swamp Woodland (spruce-mixed phase)

The map class "Conifer Swamp Woodland (spruce-mixed phase)" is composed of the following vegetation associations, each described separately:

- Red Maple - Conifer Acidic Swamp
- Black Spruce Woodland Bog

The Conifer Swamp Woodland (spruce-mixed phase) map class (CSW) is a broad map class encompassing several variations of conifer swamps. It is considered one of two map phases within the Woodland Conifer Wetlands group. Either red or black spruce dominates, sometimes mixed with cedar and deciduous species. CSW stands dominated by red spruce include red maple, green ash, and often yellow birch, balsam fir, and cedar. Stands dominated by black spruce may contain tamarack, cedar, and red maple.
